

Selected Projects

StreamKit

Open-source Python library that simplifies writing resilient Kafka consumers, with retry policies, dead-letter queues and metrics. Used in production at Northwind Analytics and by several external teams. Written in Python with a small test harness based on testcontainers.

- About 1,200 GitHub stars and 35 contributors.
- Role: creator and maintainer since 2022.

Pipeline Observability Dashboard

Internal tool that tracks freshness, volume and schema drift for Airflow-managed datasets and alerts data owners through Slack. Built with FastAPI, PostgreSQL and a small React front end.

- Covers 140 datasets and sends about 20 actionable alerts per week.
- Adopted by two other business units after a one-hour demo.

Warehouse Cost Explorer

A weekend project that attributes AWS data-platform spend to teams and pipelines using cost-allocation tags. It helped identify the compaction and right-sizing work that cut monthly spend by 28%.
